DOJ Letters sent to Providers	Presenter:	
Leadership Support: New Ambulatory 0.5 FTE pharmacist	Presenter:	
Opioid Abuse Providers Task Force	Presenter:	
Collaboration with UW School of Pharmacy & Pharmacy Society of Wisconsin (Community)	Discussion: Guest:	
Next Meeting: August 21, 2019 at 0830 – OB Conference Room Future Meeting: September 18, 2019 at 0730 – Admin Conference Room		

Breakdown of the Standards:

PC.01.02.07

EP1: The hospital has defined criteria to screen, assess, and reassess pain that are consistent with the patient's age, condition and ability to understand.

EP2: The hospital screens patient for pain during emergency department visits and at the time of admission

EP3: The hospital treats the patient's pain or refers the patient for treatment

Note: Treatment strategies for pain may include non-pharmacologic, pharmacologic, or a combination of approaches

EP4: The hospital develops a pain treatment plan based on evidence-based practices and the patient's clinical condition, past medical history, and pain management goals.

EP 5: The hospital involves patients in the pain management treatment planning process through the following:

- Developing REALISTIC expectations and MEASUREABLE goals that are understood by the patient for the degree, duration and reduction of pain
- Discussing the objectives used to evaluation treatment progress (for example, relief of pain and improved physical and psychosocial function)
- Providing education on pain management, treatment options, and safe use of opioids and non-opioid medications when prescribed (to staff?)

EP6: The hospital monitors patients identified as being high risk for adverse outcomes related to opioid treatment.

EP7: The hospital reassesses and responds to the patient's pain through the following:

- Evaluation and documentation of response (s) to pain intervention (s)
- Progress toward pain management goals including function ability (for example, ability to take a deep breath, turn in bed, walk with improved pain control).
- Side effects of treatment
- Risk factors for adverse events caused by treatment

EP8: The hospital educates the patient and family on discharge plans related to pain management including the following:

- Pain management plan of care
- Side effects of pain management treatment
- Activities of daily living, including the home environment, that might exacerbate pain or reduce effectiveness of pain management plan of care, as well as strategies to address these issues
- Safe use, storage, and disposal of opioids when prescribed.
